

Subject: [radiojove-data] 04 Nov 2014 non-Io-A

From: Dave Typinski <davetyp@typnet.net>

Date: 11/07/2014 22:20

To: RadioJove-Data <radiojove-data@lists.nasa.gov>

Adding to Tom & Wes & Jim's nice reports, here's another view of the non-Io-A from Tuesday morning.

This was a strong non-Io-A storm. One must wonder if the emission amplitude has anything to do with the large amount of solar activity last week.

RCP dominant L bursting observed from 16 to 27 MHz. Curved modulation lanes were visible with both positive and negative drift rates.

Jupiter was -14° to $+10^\circ$ off axis.

Jupiter was leading the Sun by 81° .
