To: RadioJove-Data <radiojove-data@lists.nasa.gov>

Adding to Tom's nice report, here's some Io-C from Monday afternoon along with power line buzz and a slew of Type VI solar RFI.

The line noise wiped out the strip chart.

LCP dominant narrow band S burst trains 1737-1946 UTC from 16 to 22 MHz, negative frequency drift emission envelope. No modulation lanes.

Jupiter was -12° to $+20^\circ$ off axis.

Jupiter was trailing the Sun by 12° .
