Here's some Io-C from Monday afternoon. Some regional lightning as well.

LCP dominant L bursting 1755-1805 UTC from 16 to 19 MHz, negative frequency drift emission envelope, no modulation lanes.

LCP dominant N event 1802-1847 UTC from 16 to 20 MHz, negative frequency drift.

Jupiter was -3° to $+11^\circ$ off axis.

Jupiter was trailing the Sun by 7° .
